World's Choicest Fruit Trees

Dwarf Fruit Trees

The prices in this folder cancel all previous prices.

We strongly advise the planting of Dwarf Fruit Trees. They require very small space and can be grown anywhere, and often fruit the first year after planting. They come into full bearing much quicker than any of the other fruit trees and, being of dwarf or bush form, can be very easily pruned and sprayed. The varieties listed below are among the best, although we shall be glad to supply a more detailed list upon application.

Prices, \$9, \$12, \$15 per doz.

DWARF APPLES

Allington Pippin. Medium size; fine dessert Apple. Winter.

Baldwin. One of the best for all purposes. Winter.

Beauty of Bath. Early; summer Apple.

flavoring vinegar.
Thyme (*Thymus vulgaris*). Used in seasoning.
Woodruff (*Asperula odorata*). For flavoring wine.
Wormwood (*Artemisia absinthium*). Has medicinal
qualities.

Trained Fruit Trees

We grow and import every year a large quantity of these profitable trees. There is no reason why they should not be grown in this country with the same degree of pleasure and profit as in Europe.

They are one of the most attractive features of European gardens, and have now become very popular in this country. They are decidedly useful and ornamental, and very superior in quality. No more skill is requisite in their cultivation than for ordinary fruit trees. Ladies who love a garden will find the cultivation of trained fruit trees fascinating occupation. Nothing is more pleasing to a lady than to gather fruit for her own table, picked from her own garden and grown by herself.

The advantages of growing trained fruit trees are manifold. They bear handsome fruits soon after planting, which, on account of their branches being closer to the ground ripen much quicker and are of better flavor than those on the ordinary trees; strong winds do not affect them. They do not shade any portion of the garden, and this is a distinct advantage when the garden is small. They can be planted against terrace, boundary and garden walls, fences and buildings, and even against the residence.

Trained fruit trees are necessarily higher in price than the ordinary fruit trees, on account of age, generally ranging from six to twelve years, and having been constantly transplanted to insure success. We also desire to point out that only the very best dessert varieties are trained in this way.

We have trained forms in **Apples, Pears, Peaches, Plums, Apricots, Nectarines, Cherries.**

We plan and plant fruit gardens everywhere.
